

SONARGUARD[®]

POOL SECURITY SYSTEM

“The new standard you can trust”

Provides the maximum degree of safety
available for your family

Why Choose SonarGuard®?

SonarGuard® is the only system that...

- ▶ Has had several rescues of children and pets.
- ▶ Provides immediate 100% detection in any size or shape pool or spa.
- ▶ Detects a child in less than a second.
- ▶ Covers both pool and spa with one system.
- ▶ Is permanently installed in a new or existing pool/spa by certified technicians.

“Your security system has worked flawlessly since installation and continues to perform exactly as you promised.”

BILL C. ~ SANTA ANA, CA

“My son was less than 18” away from me when he walked into the pool. You would think that you would hear the water splash, but it isn’t so. When the alarm went off, I reacted so quickly... I am truly thankful to have SonarGuard®.”

ALMA C. ~ ORANGE COUNTY, CA

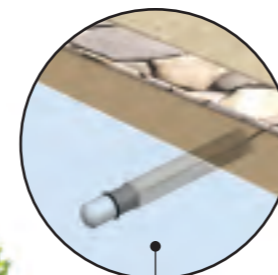

“When our son went into the spa and SonarGuard® alarmed, we realized how much we depend on the system.”

BEVERLY L. ~ TEMECULA, CA

How it works:

THE “SMART” POOL SAFETY SYSTEM. Able to differentiate between a child falling into the pool and other things like wind, rain, a dog drinking from the pool, or even a beach ball bouncing along the pool’s surface.

THE TRANSDUCER or “underwater sensor” creates sound waves, which make up the invisible “sonar-net.”

DISTINCT EMERGENCY SIGNAL. When a child falls into the pool, the “sonar-net” is broken and immediately triggers a distinct sounding alarm, so you can respond quickly to save a life.

ALARM KEYPAD

INSIDE HORN

THE KEYPAD provides continuous system status and is used to put the system into temporary standby for when your kids go swimming. The system will automatically rearm after standby mode.

History of SonarGuard®

History of RJE

SonarGuard® was developed by RJE Technologies, Inc. in Irvine, CA. Its parent company, RJE International, Inc. has vast experience and success with advanced underwater military and commercial sonar technology. Established in 1991, the company is the world's leading supplier of the most advanced diver sonar navigation equipment to the military (Special Forces teams, i.e., SEALs), and commercial diving markets.

RJE decided right at the beginning to treat pool safety as a science with a systematic and professional approach to technology development, performance, and validation. SonarGuard® now has worldwide installations and is growing rapidly due to its proven performance and reliability.

Child safety is our number one goal at RJE Technologies. We provide a high quality safety product that is unrivaled and will give homeowners peace of mind, knowing they have installed that most critical layer of defense.

SonarGuard® was developed by RJE Technologies, Inc., headquartered in Irvine, California

SonarGuard®

SonarGuard® is an advanced swimming pool security system, which creates an "invisible" underwater sonar-net. It notifies parents or caretakers immediately if a child falls into the pool. The system works on any size or shape pool. It can be fitted on any new or existing pool and/or spa. SonarGuard® represents the best solution to pool security and safety for the pool owner.

This "intelligent" system distinguishes the difference between a real event and

pool toys, wind, or a dog drinking from the water's surface.

Armed system status is displayed on the remote keypad by a glowing green light. The homeowner uses the remote keypad to put SonarGuard® into standby mode when the pool is to be used. Three minutes prior to rearming, the system will give off small beeps as a warning that it is going to rearm.

Once the standby mode time has elapsed, the system will automatically rearm.
